Claim 12, Fig 144; 813pp; English.

ANUI2172-ANUI2446 represent novel human secretory and transmembrane PRO CC polypeptides. The PRO polypeptides are useful to detect other PRO CC polypeptides, to link bloactive molecules to cells expressing PRO CC polypeptides, to modulate biological activities of cells expressing PRO CC polypeptides, and to detect the presence of mammalian lung, colon, CC breast, prostate, rectal, cervical or liver tumours by comparing PRO CC polypeptide expression in a cell sample to that in a control sample. Some CC of the 275 sequences are also useful to stimulate the release of tumour CC differentiation of chondrocytes, the proliferation or gene expression in cercosis factor-alpha (TNP-alpha) from human blood, the proliferation or cc pericyte cells, the release of proteoglycans from cartilage, the cc proliferation of inner ear utricular supporting cells or of T-cc proliferation of inner ear utricular supporting cells or of T-cc proliferation of interaction of endothelial cells. Some of the PRO CC plypeptides may modulate glucose or free fatty acid uptake by skeletal CC useful or by adipocytes; or inhibit binding of A-peptide to factor CC involved in binding interactions. The polymentides can be used in assays to identify molecules CC involved in binding interactions. The polymented cor knock out animals and can be used in gene therapy

The invention describes a novel isolated human matrix metalloproteinase CC (MWP) polypeptide (I) 46798. (I) and the polynucleotide encoding it (II) CC are useful as novel diagnostic target and therapeutic agent for valuating the efficacy of a treatment of a disorder. (I) CC is useful as novel diagnostic target and therapeutic agent for prognosticating, diagnosing, preventing, inhibiting, alleviating or CC curing MMP-related disorders, where (I) functions in normal tissues to CC facilitate growth, repair, replacement or renewal of endothelial, conting the control of the care of endothelial, epithelial, CC extracellular matrix through or into which new endothelial, epithelial, cor neuronal cells must move, grow or proliferate. Examples of the CC disorders involving degradation of the extracellular matrix include CC cardiovascular disease e.g. heart failure and atherosclerosis, carthritis, neurological disease, periodontal disease, skin CC cardiovascular disease e.g. heart failure and atherosclerosis, skin culceration, liver fibrosis, emphysema, fibrotic lung disease, bacterial cand viral infections, wound healing, chronic injury, acute disorder CC and viral infections, wound healing, chronic injury, acute disorder CC andiogenesis and tissue invasion and matrastasis by tumour cells. This is the amino acid sequence of the long form of the novel human matrix of metalloproteinase 46798 described in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

New human matrix metalloproteinase nucleic acid and polypeptide molecules, designated 46798, useful for diagnosing, preventing or treating cancers, ischemia, Parkinson's disease heart disease or edema.

Claim 17; Page 113-114; 117pp; English.

The present invention relates to the isolation of novel human matrix metalloproteinases (MMP), designated 46798, and the polynucleotide sequences encoding them. The MMP 46798 polypeptide and polynucleotide sequences are useful for diagnosing, preventing, alleviating or treating metalloproteinase-associated disorders such as cell proliferation and/or differentiation disorders (e.g. carcinoma, sarcoma, leukaemia, breast cancer, or lung cancer), neurological disorders (e.g. schizophrenia, ischaemia, infarction, parkinson's disease or Huntington's disease), inflammatory disorders (e.g. Crohn's disease), immune disorders (e.g. diabetes mellitus or arthritis), cridiovascular disorders (e.g. developmental disorders, lung disorders (e.g. chronic bronchitis, pulmonary congestion or oedema), and blood/blood clotting disorders. The present semence represents human MMD 46708 #2

                                                                                                                     The invention describes an isolated nucleic acid (I) comprising, or which CC has 80 % sequence identity to, or the full-length coding sequence of, one of 275 nucleotide sequences, and which encodes a corresponding CC polypeptide selected from 275 amino acid sequences, where all sequences are given in the specification. The polypeptide encoded by (I) is used to CC detect PRO polypeptides, link a biological activity of a cell expressing a CC PRO polypeptide, modulate a biological activity of a cell, stimulate the CC release of tumour necrosis factor (TNP)-alpha from human blood, modulate the uptake of glucose or free fatty acid by cells, stimulate the CC the uptake of glucose or free fatty acid by cells, stimulate or inhibit the proliferation or differentiation of cells or gene expression, CC stimulate the release of proteoglycans, stimulate the release of cytokine from peripheral blood mononuclear cells, inhibit the binding of A-peptide to factor VIIA, or detect the presence of tumour in a mammal. The nucleic acid and polypeptide encoded by it, are useful for treating inflammatory clienases, organ failure, athrosoclerosis, cardiac injury, infertility, infert

                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to the isolation of novel human PRO polypeptides, and the polynucleotide sequences encoding them. The PRO polypeptides are secreted and transmembrane proteins. The PRO polypeptides and polynucleotides are useful for preparing a medicament useful in the treatment of diabetes, bone and/or cartilage disorders (e.g. rheumatoid arthritis, sports injuries, osteoarthritis), obesity, hyper- or hypo-insulinaemia, hearing loss, and coagulation disorders (e.g. stroke, heart attack). Anti-PRO antibodies are useful in diagnostic assays for PRO, by detecting its expression in specific cells, tissues or or natural sources. ABUSOS70-ABUSOSTO of PRO from recombinant cell culture polypeptides of the invention. Note: The sequence data for this patent was obtained in electronic format directly from the USPTO web site at sequence golypsipsDIDEntry.html
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  20-DEC-1999;

The PRO CC polypeptides are secreted and transmembrane proteins. The PRO CC polypeptides are useful for detecting other PRO polypeptides, for linking CC bloactive molecules to cells expressing PRO polypeptides, for modulating CC biological activities of cells expressing PRO polypeptides, and for for CC identifying agonists or antagonists. The PRO polypeptides are useful for CC for stimulating the release of tumour necrosis factor (TNF)-alpha from CC human blood, for stimulating the proliferation or differentiation of CC chondrocytes, and detecting the prosence of tumours. The polymucleotide sequences encoding PRO polypeptides are useful as hybridisation probes, in chromosome and gene mapping, in the generation of antiense RNA and CC DNA, in the preparation of RRO polypeptides, for generating transgenic animals or knockout animals, for the generatic analysis of individuals with genetic disorders, and in gene therapy. ABU66570-ABU66844 represent the human PRO polypeptides of the invention. Note: The sequence data for this patent was obtained in electronic format directly from the USPTO web site at sequence and september of the polypeptides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 520 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New secreted and transmembrane PRO nucleic acids, useful for gene therapy, in chromosome and gene mapping, as chromosome markers, in tissue typing, and in chromosome identification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 12; Fig 144; 660pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Local Similarity
                                                                                                                                                                                                                                             470
                                                                                                                                                                                                                                                                                                                                                    410
                                                                                                                                                                                         470

          The invention describes an isolated human PRO polypeptide. The PRO polypeptides are useful in detecting PRO polypeptides in a sample, in linking a bioactive molecule to a cell expressing a PRO polypeptide, and in modulating at least one biological activity of a cell expressing a PRO polypeptide. PRO1312 stimulates hypertrophy of neonatal heart and is thus useful for treating cardiac insufficiency disorders. PRO1154 and PRO1186

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CC useful for treating conditions or disorders where angiogenesis would be conserved to the polypeptide are cc useful for treating cancerous tumours. PRO812 inhibits vascular cc endothelial growth factor (VEGF) stimulated proliferation of endothelial cc cells and is thus useful for inhibiting endothelial cell growth in cc mammals which would be beneficial in inhibiting tumour growth in CC mammals which would be beneficial in inhibiting tumour growth in PRO826, PRO1068, PRO1184, PRO1346 and PRO375 stimulate proliferation of cc immune response. PRO826, PRO826, PRO826 or PRO1332 enhance survival of cc immune response. PRO828, PRO826, PRO1032 is also enhances survival/proliferation of cretinal neurons cells (PRO1132 is also enhances survival/proliferation of cod photoreceptor cells) and therefore are useful for treating retinal cc disorders of injuries, e.g. retinitis pigmentosum, AMD. PRO819, PRO813 cc and PRO11066 induce proliferation of mammalian kidney mesangial cells, cc and therefore are useful for treating retinal cc decreased mesangial cell function such as Berger disease or other caphropathies associated with dermatitis, herpetiformis or Crohn's cc disease. PRO1310, PRO844, PRO1312, PRO1192 and PRO1387 induce the cc proliferation and/or redifferentiation of chondrocytes in culture and are thus useful for treating sports injuries, and arthritis. This is the cc amino acid sequence of a novel human PRO protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

New isolated nucleic acid encoding a PRO polypeptide, e.g. PRO4978, useful in molecular biology, chromosome and gene π generating antisense RNA and DNA, and in gene therapy. mapping, 햠

The invention relates to an isolated nucleic acid comprising at least 80% sequence identity to a PRO (secreted and transmembrane protein) cDNA comprising a nucleic acid (a) encoding a PRO polypeptide, or its extracellular domain (with or without its associated signal peptide), which comprises any of the 275 120-850 residue amino acid sequences, given in the specification; (b) comprising any of the 275 300-3500 nucleotide sequences, given in the specification; or (c) comprising the full-length coding sequence of the nucleotide sequences given in the specification, or of the DNA deposited under any of the American Type Culture Collection (ATCC) Accession Numbers listed in the specification. Also included are a vector comprising the novel nucleic acid, a host cell comprising the vector, producing a PRO polypeptide, the isolarad non

CC adipocyte cells, Stimulating the proliferation or differentiation of CC chondrocyte cells (or proliferation of or gene expression in pericyte cells), Stimulating the proliferation of inner ear utricular supporting CC cells (or of T-lymphocyte cells, or of endothelial cells), inhibiting the binding of A-peptide to factor VIIA, or differentiation of adipocyte CC cells, detecting the presence of a tumour in a mammal and an CC cells, detecting the presence of a tumour in a mammal and an CC cells, detecting the presence of a tumour in a mammal and an CC cells, in the specification. The polymuclectide is useful in molecular biology, CC including uses as hybridisation probes, in chromosome and gene mapping, CC including uses as hybridisation probes, in chromosome and gene mapping, CC including uses as hybridisation probes, in chromosome and gene mapping, CC including uses as hybridisation probes, in chromosome and gene mapping, CC including uses as hybridisation probes, in chromosome and gene mapping, CC including uses as hybridisation probes, in chromosome and gene mapping, CC including uses as hybridisation probes, in the complete by recombinant techniques, and in generating either transgenic animals or CC knock-out animals which, in turn, are useful in the development and CC screening of therapeutically useful reagents. The PRO polypeptide or the complete of antibody is used in preparing a medicament for treating a condition responsive to the polypeptide or antibody, such as tumours, and in cranicular dispersents a PRO constructed assays. The present sequence represents a PRO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

```
The invention relates to an isolated nucleic acid comprising, or which is at least 80% identical to, or the full-length coding sequence of, any of the 275 nucleotide sequences, encoding the corresponding PRO polypeptide (one of 275 secreted or transmembrane proteins). The nucleic acid further comprises the full-length coding sequence of the DNA deposited under American Type Culture Collection (ATCC) accession number in a list given in the specification. Also included are vectors and host cells for
                                                                                                                                                                                                                                                                                                                                                                                                                                            02-MAR-2000

Novel secreted and transmembrane polypeptide for modulating biological activity of cell expressing the polypeptide, identifying agonists or antagonists of polypeptide, and as molecular weight markers.

Claim 12; Fig 144; 659pp; English.

The invention describes 305 nucleic acids encoding PRO (secreted and transmembrane) polypeptides (I). (I) is useful for stimulating the release of TNF-alpha from human blood, for modulating the uptake of glucose or PRA by skeletal muscle cells or adipocyte cells, for stimulating the proliferation or differentiation or differentiation of chondrocyte cells, for stimulating the proliferation of or gene expression in pericyte cells, for stimulating the release of proteoglycans from cartilage, for stimulating the proliferation of inner ear utricular supporting cells, for stimulating the proliferation of Tlymphocyte cells, for stimulating the proliferation of Tlymphocyte cells, for stimulating the proliferation of Tlymphocyte cells, for stimulating the proliferation of Tlymphocyte cells, for stimulating of the release of a cytokine from PBMC cells, for inhibiting the binding of A-peptide to factor VIIA, for inhibiting the differentiation of adipocyte

```
cells, for stimulating proliferation of endothelial cells, for detecting the presence of tumour in a mammal. The tumour is lung, colon, breast, crostate, rectal, cervical or liver tumour. The oligonucleotide probes are useful for isolating genomic and cDNA nucleotide sequences or contisense probes. (I) is also useful as therapeutic agent pro is useful in assays to identify other proteins or molecules involved in binding colon assays to identify other proteins or molecules involved in binding colon assays to identify other proteins or molecules involved in binding colon dentify in generation of antisense RNA and DNA, in the comparation of PRO polypeptide, for generating transgenic animals or knockout animals which in turn are useful in the development and contromosome identification, as chromosome marker, and for generating colonsome identification, as chromosome marker, and for generating transgenic assays for PRO, e.g. detecting its expression in specific cells, tissues or serum, and for contromes. (I) and (II) are useful for tissue typing. This is the amino colon colon acid sequence of a novel human secreted and transmembrane PRO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Matches

```
transmembrane polypeptides) and the polymucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TNF-alpha) from human blood, a method for stimulating the proliferation or differentiation of chondrocyte cells and a method for detecting the presence of a tumour in a mammal (e.g. adrenal, lung, colon, brease, prostate, rectal, kidney, cervical and liver tumours). The polymucleotides are useful in molecular biology, including uses as hybridiastion probes, in chromosome and gene mapping, in generating antisense RNA and DNA and in gene therapy. The polymucleotides may also be used in preparing PRO polypeptides by recombinant techniques and in generating either transgenic animals or knock-out animals which are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      11 - AUG - 2000

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     glucose or FFA by skeletal muscle cells or adipocyte cells, for stimulating differentiation of adipocyte cells, for stimulating proliferation of or gene expression in pericyte cells, for stimulating proliferation of inner ear utricular supporting cells or T-lymphocyte cells, for inducing endothelial cell tube formation and for treating various bone and/or cartilage disorders such as sports injuries and arthritis. PRO polypeptides which stimulate the release of proteoglycans from cartilage are useful for treating sports related joint problems, articular cartilage defects, osteoarthritis and rheumatoid arthritis. PRO polypeptides are also useful for treating various mammalian haemoglobinassociated disorders such as various thalassaemias and conditions which may benefit from enhanced local immune system cell infiltration. This sequence represents a human PRO polypeptide of the invention. Wote: The sequence data for this patent is also available in electronic format from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              useful in the development and screening of therapeutically useful a reagents. The PRO polypeptides or antibodies are used in preparing a medicament for treating a condition responsive to the polypeptides or antibodies, such as tumours, for stimulating and inhibiting proliferation of human microvascular endothelial cells, for modulating the uptake of

New . PRO nucleic acid, useful tumors. for preparing ω composition for treating

Claim 12; Fig 144; 660pp; English.

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polypucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis consideration of the properties of the presence of a tumour in a method for stimulating the proliferation or differentiation of chondrocyte cells and a method for considerate, rectal, cervical and liver tumours). The polynucleotides are considered to molecular biology, including uses as hybridisation probes, in generating and gene mapping, in generating antisense RNA and DNA and in collypeptides by recombinant techniques and in generating PRO collypeptides by recombinant techniques and in generating PRO collypeptides or antibodies are used in preparing PRO collypeptides or antibodies are used in preparing PRO collypeptides or antibodies are used in preparing such the polypeptides or antibodies, such
